

FOR YOUR MOBILITY

**DRIVE THE CHANGE**

To know more about electric mobility

## THE ELECTRIC MOBILITY

**Enjoy all the flexibility of an electric car in every moment of your daily life, plan your trips, short or long, with no worries!**

In addition you will only have benefits:

- Electric engine is more efficient and needs less maintenance
- Automatic transmission, for a driving experience tailored on your type of road (urban/extra-urban)
- Electric cars allow you to access to ZTL areas or ECOPASS without any problem and can be parked in the restricted areas.
- You can travel at any time, without worrying for eventual driving bans.
- Battery is your new tank, electricity your new fuel. Drive sustainable mobility of the future

FOR YOUR MOBILITY

## DRIVE THE CHANGE

To know more about electric mobility

## Urban Roads

The average kilometers driven in a city is no more than 50 per day. Full electric vehicles and plug-in are more suitable for urban roads without the need of mid-term recharge. You will only have to choose if you want to recharge them domestically or outside, based on your needs and possibilities.

Domestic recharge is for sure more comfortable and cheap, the public recharge guarantees flexibility thanks to the wide spread network of charging points.

## Extra-urban roads

By setting the road to drive on on board computer, it will suggest you the easiest way, based on the autonomy of the vehicle and on the charging points available. Based on your driving style, the path will change real time giving you the maximum safeness.

You will never risk of being left with no power.

**Thanks to Leasys rental, with everything included in the monthly fee,  
you can drive your electric car with total freedom, enjoying the best experience  
for you and for the environment!**
